

“Glorified Curse – Multidimensional Analysis on Chinese Housing Market”

Exclusive Interview with Prof. Deng Yongheng

Factors influencing China's housing market are multifaceted. Aside from policy stimulus, the lack of financing channels and periodic variations in the population structure also act to drive the market. Marriage, education, welfare and interactions with and amongst other socio-economic factors also influence movements in the Chinese housing market.

IRES Director Prof. Deng Yongheng was interviewed on the topic of “Glorified Curse - Multidimensional Analysis on Chinese Housing Market” during his participation at the first PKU-NUS Annual International Conference on Quantitative Finance and Economics from 7th to 8th May 2016 in Shenzhen, China. He was invited to deliver a speech.

In this exclusive Interview, Prof. Deng spoke about the impact of population, expectations and financial market factors on the housing market at the macro level, and made a detailed analysis of the role of government and its coping strategies. He also offered perspectives into how housing prices are also linked to the behavior of Chinese families at the micro level.
